Guidelines

Successful programs must facilitate participation of full time Triangle-based teachers or administrators in international activities to learn more about the theory and practice of technology as it applies to education by:

- attending international conferences
- traveling abroad to collaborate with teachers or professionals
- allowing teachers or professionals from abroad to travel to the US to lecture, teach and/or collaborate with Triangle-based teachers
- to attend pre-or post- gatherings of Award recipients as the program grows, for the purpose of networking and furthering the base of knowledge and experience

Program participants must be full time teachers or administrators working in a Durham, Orange, Wake or Chatham county school, college or university and must show commitment and excitement for the theory and practice of technology as it applies to education.

Programs should be designed to give preference to teachers or administrators with little experience abroad but will not penalize those with ample international experience.

Technology and how it applies to education must be a central component of the program. Programs that only incorporate technology as a tool and not as a core component of the learning experience will not be considered.

Priority will be given to programs that work with countries that do not speak English as their primary language.

Program expenses may include administrative costs, instructors, travel, fees, lodging and meals.

Proposal Questions:

Please answer each question below within the established word limits.

1. What community need will be addressed by this project or program?

2. Provide a brief description of the project. Indicate when the project will begin and end, including approximate dates for travel. Indicate how the international location of the project was selected.

3. Describe the core technology component of this project. What technology will the participants learn and how will it impact their teaching? How is the international destination supporting the core technology component of the program?

4. How will the program assist and encourage participants to integrate the international experience in the classroom? Please describe any follow up or support available to the participants along with any partners in the schools and/or community that will help incorporate this program into the classroom or curriculum.

5. What are the anticipated outcomes of the project? How will you determine the project's success?

6. What barriers to success do you anticipate? How do you plan to overcome these barriers?

7. How do you plan to sustain this project beyond the current funding year, if your project is selected?
